

ENVIRONMENTAL AWARENESS SERIES

Part 2: Protecting our North American Wetlands

Video made possible by possible by Education Programs at the George H.W. Bush Presidential Library and Museum

Wetlands are an important feature of America's geographic make-up. They come in many different forms. For example, coastal marshes, act as "cradles of the sea" and buffer inland areas from hurricanes. Wetlands support a wide variety of life and ecosystems.

Come join us as we explore the North American Wetlands Conservation Act with a lesson, a salt-water density activity, and a guided craft on making colorful coffee filter flowers. This video is S.T.E.A.M. based and student-centric.

This is the second of our Environmental Awareness Series. Upcoming topics include: Wildlife Refuges and the Antarctic Protection Act.

President Bush visits Everglades National Park and participates in a discussion with sixth grade students involved in the National Parks Service Environmental Education Program. January 19, 1990
